

The Hurricane Bravo™ can deliver water at a staggering rate of 5,000 U.S. gallons per minute, easily outperforming all other methods of water distributor filling systems. With over 30 years of precision fine tuning and field testing, the Klein Hurricane Bravo™ is a first of its class. This engine driven, trailer mounted, high volume pump is 100% self-contained and 100% portable.

The Hurricane Bravo™ can pump from a natural lake, pond, or a man-made reservoir in less than four feet of water. It is designed to dramatically improve the productivity of water distributing vehicles. It's quick, easy, and safe. The Hurricane Bravo™ can be towed behind a standard pickup truck or hauled on a trailer and can be easily erected by one man in about half an hour. It is powered by the Caterpillar® industrial diesel engine taking advantage of renowned Caterpillar® quality and the best service organization in the world.
